### Sugar Candy Experiment

This sugar Candy experiment is made using the principle of saturation. In a saturated solution, the sugar molecules have a higher chance of hitting one another because of lack of space to move around. When this happens, the sugar molecules start sticking together and nice shapes will appear on the candy stick.

### Lava Lamp Experiment

The Lava Lamp experiment is based on lower density of oil and gas bubbles than water which allows those to float on top of the water. The carbon dioxide bubbles generated by dissolving frizzy tablet in colored water will bring colored water droplets in oil layer forming amazing lava lamp.
